

Apigee API Management

API lifecycle management to support new business growth

Apigee : The cross-cloud API management platform

Accelerate your digital transformation efforts with Apigee and Google Cloud. This service helps you gain first-hand experience with the Apigee platform with a flexible scope focused on getting APIs into production quickly.

This service focuses not only on the designing and delivering APIs, it also focuses on creating self sufficiency in your organization by ensuring that your teams learn as they go from Tangerine experts.

Apigee

Helps every company to digitally transform, stay relevant, and compete/grow

All-in-one platform to build, use, and run APIs

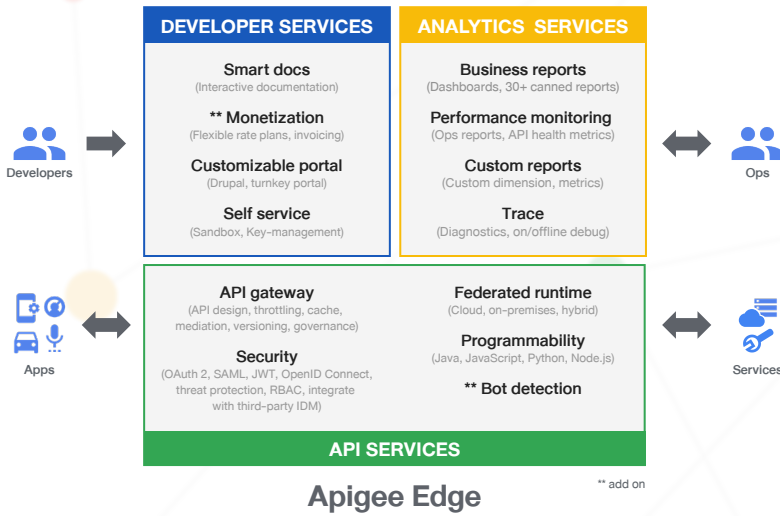

Business enabler platform, not just another IT tool

Apigee Full API Lifecycle Management

Apigee capabilities

Privacy and adherence to compliance

- Data sovereignty**
Flexibility to store data in the region of choice
- Data protection**
Gain control over authentication to encrypted data to ensure that sensitive information is only accessible from authorized networks, thereby mitigating data exfiltration risks.
- Data loss prevention**
Protect sensitive data—classify, mask, and tokenize sensitive elements
- Compliance**
Widely recognized—ISO/IEC 27001, ISO/IEC 27017, and ISO/IEC 27018, AICPA SOC 1, 2, and 3—as well as industry standards such as CSA STAR and PCI-DSS.

APIs are ubiquitous

The core of modern application development and digital transformation efforts. Being able to optimize, secure, and monitor the API

Apigee is an established leader

Recognized by Gartner’s Magic Quadrant 6 years running

Apigee is a technology catalyst

Driving faster ROI, greater flexibility, increased development efficiency, and improved security.

Apigee is used in

- Every online order from a major coffee shop chain
- Every time a package is tracked with several major shippers
- Every sale at several major retailers
- Every command sent to a popular smart light bulb
- Every photo printed at large drugstore chain

Get start with Apigee Choose the right deployment that fits your needs

SaaS

Managed Cloud Software as a Service offering by Google. Simply configure, deploy and manage your APIs in the cloud.

Hybrid

Run workloads across Cloud and on-prem. Separation of runtime from management plain offers the autonomy to deploy runtimes wherever you like.
